

Please Do Not allow the BPL systems to be approved. No BPL!
The tests for interference on the amateur radio bands have shown that even at what are called acceptable levels of RF by the FCC that the noise generated makes Amateur communication impossible for most all stations under most conditions. I frequently also operate mobile, the BPL operations make it impossible to communicate on the HF bands. There are other ways to feed broadband systems without polluting the power grid and ruining the HF bands for Amateur, military, and emergency uses. I also frequently experiment with QRP (low power) signals on the HF bands, this practice for all would be lost along with the low power digital and narrow band modes used by amateurs. The arrogance of the BPL industry is unbelievable on this subject. Thanks for accepting my comments.
